

# Not all Zirconia is the Same!

Did you know Zirconia which is **Axial Pressed** is inferior to **Isostatically Pressed**?

The Axial Pressed process of placing the powder into a machine which presses from the top and bottom to squeeze the Zirconia into a tablet, produces a much weaker material which is liable to uneven shrinkage during manufacture!

Welcome to **CHAMELEON Zirconia** . . .

. . . a superior crown using Zirconia that is Isostatically Pressed. Placed in a container which is submerged in oil to which even pressure is applied, a much more consistent tablet is produced, making Chameleon crowns considerably stronger and more stable – 'CE-marked' for dental use.

**Do you get a 5-year guarantee with your Zirconia crowns?  
 . . . you will with CHAMELEON!**

**AN EXCLUSIVE OFFER TO YOU**

**we will produce CHAMELEON Zirconia Crowns for . . .**

**Contact us for this month's special offer**

*Use a laboratory that you can trust to  
use Zirconia they can trust*
